Pau, 6th July 2023

## **Teréga Solutions and Solagro join forces to develop methanisation projects**

**On Thursday, 6th of July, Teréga Solutions, a subsidiary of the Teréga group, and Solagro, a collective company specialising in engineering, consultancy and training in the agroecology and methanisation sector, signed a Memorandum of Understanding (MOU) for the development of methanisation projects for farmers and groups of farmers. This partnership will be built on the respective strengths and expertise of these two stakeholders with their complementary skills.**

### **Stakeholders committed to sustainable agricultural methanisation that benefits territories**

Teréga Solutions is committed to being the preferred partner of farmers in developing "made in France" agricultural methanisation. This approach is characterised by small to medium-sized facilities, a reasoned and concerted approach and the creation of value that primarily benefits the region.

To make this vision a reality, Teréga Solutions has joined forces with Solagro, a leading player in the field of methanisation in France, with Qualiméthà certification.

This collaboration aims to support farmers who want to make the most of the residues from their farms by creating renewable, low-carbon energy that is accessible to everyone via the gas transmission and distribution networks. The industrial synergies between these two players will also encourage the development of infrastructure that is in line with local environmental objectives.

As part of this partnership, Teréga Solutions is responsible for canvassing new territories, as well as managing and coordinating projects. For its part, Solagro is providing its technical expertise to carry out feasibility studies, which will form the basis on which projects will be developed right through to financing and construction.

*"At Solagro, we advocate sustainable methanisation, based on a territorial network of facilities on a human scale, to optimise resources as close as possible to production, while maximising local benefits and encouraging collective agricultural approaches. As such, we are delighted to be supporting Teréga Solutions in the emergence of projects that are in line with the model we advocate,"* says **Jérémie Priarollo - Head of Methanisation Engineering at Solagro**

*"Teréga Solutions is working to develop autonomous, local agricultural methanisation and to promote "made in France" methanisation. This partnership expresses the reality of our desire to offer custom solutions to farmers wishing to optimise their facilities by contributing to the sustainability of alternative energy production methods,"* adds **Dominique Mockly, Chairman of Teréga Solutions.**

### **Teréga Solutions, a committed stakeholder in the biomethane industry**

By supporting farmers in their projects and ensuring their long-term survival, Teréga Solutions helps to create value for local communities. Recovering biowaste by methanisation not only reduces greenhouse gas emissions, but also helps in the decarbonisation of regions by producing renewable and decarbonised energy.

#### **About Solagro:**

Solagro is an engineering, consultancy, research and training company. Its teams put their expertise to work for the energy, agroecology and methanisation transitions. Methanisation is chief among the levers for accelerating the transitions: in the Afterres2050 scenario developed by Solagro, methanisation is set to become a standard feature of all agricultural production, whether on livestock or arable farms. It can take many different forms, as it does today, reflecting the diversity of different regions: on-farm methanisation plants, collective regional facilities, and collective agricultural units. #### **About Teréga Solutions**

Teréga Solutions is a subsidiary of Teréga. Teréga is a true accelerator of energy transition and for more than 75 years has deployed its exceptional expertise in the development of gas transport and storage infrastructures and now designs innovative solutions to address the major energy challenges in France and Europe. The Teréga Group shareholders include SNAM, Pacific Mezz Luxembourg (GIC), Ouest Gaz (EDF Invest), Predica (CAA) and Crédit Agricole Assurances Retraite (CAA).
